LONDON

INTRODUCTION.

THE manuscript now for the first time printed is in the handwriting of Harvey, as may be seen by a comparison with his letter published some years since by Sir George Paget and with other letters in his handwriting. The title-page bears his signature, "per me Gulielmum Harveium," and the date A.D. 1616. The manuscript, with another volume also in his handwriting, formed part of the collection of Sir Hans Sloane, which became the property of the nation in 1753. Of its history from 1657, the year of Harvey's death, till 1753 nothing is certainly known. At the death of many physicians of his time, as of Dr. Francis Bernard (1698) and of Dr. Edward Browne (1708), Sir Hans Sloane bought their manuscripts and note-books, and it was most likely from a purchase o this kind that the manuscript became part of the Sloane collection. Dr. Lawrence, the editor of the edition of Harvey's works published by the College of Physicians in 1766, had examined the manuscript and describes it correctly. Somewhat later the volume got among printed books, and could not be found among the manuscripts of the Museum. In the year 1877 it was restored to its proper place in the collection. In that year it was exactly described by Sir Edward Sieveking in his Harveian oration, who read several extracts from it and exhibited an autotype of one of its most important pages. Sir Edward Sieveking continued his investigations, and at his suggestion the subject was brought before the Royal College of Physicians, where, on March 30, 1885, Dr. George Johnson asked for the appointment of a committee to consider the question of printing in facsimile the manuscript notes of the anatomical lectures of Harvey, and gave notice that he would at the next meeting ask the College to guarantee two hundred guineas towards the expense.

Dr. George Johnson, Sir Edward Sieveking, Dr. F. Payne, Dr. Stone, and Dr. Norman Moore were appointed a committee to consider the question. The

committee presented their report on April 30, 1885, and its consideration was postponed to the next meeting.

On May 28, 1885, the report of the committee, recommending that the College guarantee the cost of one hundred copies at 2*l.* 2*s.* each, and that a permanent committee be appointed to superintend the publication, was adopted, and the committee was reappointed to arrange and supervise the publication.

Messrs. J. and A. Churchill, on the representation of the subject to them by Sir Edward Sieveking, undertook, with laudable public spirit, the remaining risk of publication, and the undertaking was further supported by a subscription from the Royal College of Surgeons of England and by several private subscribers. Messrs. Churchill, on the recommendation of Sir Edward Sieveking, employed Mr. Edward Scott, of the Manuscript Department of the British Museum, to make a transcript of the whole, a work of great labour owing to the extreme obscurity of many pages of Harvey's writing, and which Mr. Scott accomplished in a manner and in a space of time which deserve the highest commendation. The generous way in which Mr. Maunde Thompson, chief of the Manuscript Department, gave his invaluable aid in deciphering the most obscure lines has added much to the value of the transcript. The transcript is accompanied by an autotype reproduction of every page of the manuscript. Dr. George Johnson acted as chairman of the committee of the Royal College of Physicians, and the other members shared among them the several parts of the work—viz. the examination and approval of each autotype plate as it was issued, the comparison of every word of the printed transcript with the original writing of Harvey as shown in the autotype, and the revision of the proofs.

Several passages still remain obscure, but, as the reader has before him every stroke as it was made by Harvey's pen, the editors did not feel it necessary to delay the publication to the extent which would have been necessary if a minute study of all known writing of Harvey had been made, by which alone further interpretation would have been possible.

The rule followed in the transcript has been to print the words as written by Harvey without any emendation, however obvious or probable. His Latin cases are often wrong; sometimes by a slip of the pen he spells the names of well-known Latin authors in several ways; he often omits or repeats a word. All these points are exhibited in the transcript; but where Harvey marked a flexional termination

by a scratch or a stop the termination has been written out; and for the sake of clearness capital initials, which are sometimes absent in the manuscript, have been given in the transcript to all proper names. A few, for the most part illegible, additions in red ink are hardly visible in the autotype and have been omitted in the transcript. Erased words in the manuscript are indicated by inverted commas in the transcript. The use of small type on some pages and large type on others is due to the necessity of printing every page of the transcript opposite the corresponding page of the autotype.

The object of the publication was to preserve and make public the original notes of the lectures in which Harvey, in 1616, set forth for the first time his discovery of the circulation. He describes the course of the blood precisely, and lays stress upon the important evidence afforded by the valves in the veins, and the direction in which they act. The notes are of course incomplete, and cannot be expected to add to the well-known statement of the discovery which Harvey made in full, and after several years more of thought and observation, in 1628, in his "Exercitatio anatomica de motu cordis et sanguinis in animalibus," published at Frankfort. The manuscript is to be regarded with veneration as one of the most precious of the archives of English science, and as showing how early Harvey had begun to penetrate the difficulty of explaining the motion of the blood, and how long his active mind was willing to enlarge and confirm its first thoughts before he gave final expression to them and published the splendid discovery of the circulation of the blood, matured and completed by twelve years of observation and meditation.

Besides this chief and greatest value, these rough notes of Harvey have a lesser interest, because, unpolished and unaltered just as they came from his pen, as if he felt the force of the often-quoted line of Manilius,

Ornari res ipsa negat, contenta doceri,

they illustrate his ways of thought and his habits of observation. He is to be seen in his library perusing at his table the huge and nobly printed pages of Vesalius, or sitting in his chair with the terse and easily carried anatomy of Bauhin in his hand, or dipping into Aristotle or into the sermons of St. Augustine, or refreshing his memory of some passage in the familiar pages of Columbus and of Fallopius, or turning perhaps as he walked under the trees to some passage in

his favourite Virgil. It is easy to trace in the quotations given in these lectures his whole anatomical reading, and part of his acquirements in general literature. It was from Aristotle, he says, that he obtained his first direction to the true explanation of the movements of the heart, and he quotes the father of science more often than any other author. Galen comes next in order of frequency of quotation; while of the moderns, Vesalius, Columbus, Fallopius, Fernelius, Laurentius, Nicholaus Massa, Bauhin, and Piccolhomini are the writers whose opinions he most often discusses. In classical literature he had read Plautus as well as Virgil and Horace; while among prose authors, besides Cæsar and Cicero, he had studied Vitruvius. He was learned in the Scriptures, and knew something of the Latin fathers. That he was a student of Nature as well as of books, and a daily devoted observer of everything that came before him, is clearly shown in these notes. He had already been physician to St. Bartholomew's Hospital for seven years, and he quotes cases observed in its wards, and also mentions many patients seen in his private practice: Sir William Rigden, Sir Robert Wrath, Sir James Crosby, John Bracey, Mrs. Yeoung, Lady Croft, Lady Hervey, his own father, and his sister who, like Mrs. Yeoung, had an enlarged spleen which weighed five pounds. He had watched the bear tied to the stake, and cocks in their pit, and greyhounds and falcons, and noted the odd development of a boy at Holborn bridge, and of a man behind Covent garden, and the appearances in a criminal just cut down from the gallows. He had dissected many animals of all kinds, and refers to the anatomy of more than eighty. The anatomical structure of the porpoise, the kite, the angler fish, the woodpecker, the barbel, the flounder, the pastinaca, and of the chief English mammals and birds, formed part of his acquirements. Several he had examined often, and was sometimes puzzled, as in the eft, the kidneys of which he failed to discover. Some of his biographers have suggested that Harvey, however remarkable as a discoverer in physiology, was not great as a physician. This may be disbelieved, for it is certain that the powers of so careful an observer would not desert him at the bedside. These lectures contain many examples of acute clinical observation; he compares the desquamation after scarlet fever to the shaking off of the feather scales of a bird in the royal menagerie then kept at St. James's. He did not, it is true, discover amyloid infiltration of the liver, but he had noted that the liver was sometimes greatly enlarged in those who died after long-continued suppuration, and he had observed the shrunken

liver of cirrhosis, and that it sometimes followed the permanent obstruction of a bile duct. The varying appearances of gallstones and the common shape of large renal calculi were well known to him, and he describes pericarditis and its symptoms from his own observation. It is clear that he brought all his powers into the service of his patients, and in this as in every other way deserved the respect of his contemporaries. He uses much that he had heard in talk, as well as the stores of his reading and of his observation, to elucidate his lectures. He quotes Dr. Wilkinson, his predecessor and colleague at St. Bartholomew's, and Dr. Argent and other fellows of the college of his time, and what he had heard at home and abroad, in Venice, in Padua—no matter from whom so that it illustrated the points of his lecture. To most of these little notes by the way, as to his more important original observations of facts, he appends his initials in the manuscript. The lectures show Harvey to us at his books, seeing his patients in their beds, examining them post mortem, talking with other physicians, listening to the phrases of the people and watching their sports; and, lastly, they give a picture of him as no carefully prepared work could, delivering his lectures with a body dissected on the table before him, and a demonstrator who lifted up or exposed this part or that, at his bidding. There can be no doubt that the lectures interested their audience. Harvey never tries to appear learned, his whole aim seems to be to make the subject clear; there is no affectation, every remark has the stamp of his own original, thoughtful, observing mind. No method of elucidation is too homely for him; he often takes the first that strikes him. When he is mentioning the names of the several parts of the intestine, he illustrates the subject by the remark that from St. Paul's to Leadenhall there is one line of street, but many names as you go along—Cheap, Poultry, and the rest. The arrangement of the small intestine is like that of an unset ruff, and he explains the proportions of contiguous organs by a comparison of a kitchen and its appendant washhouse. The parenchyma of a gland surrounds and supports the vessels "as cotton to keep a jewel;" an acid taste rising from the stomach into the mouth reminds him of a motion from the lower to the upper house of Parliament. He follows well the rules that he lays down at the beginning for the teaching of anatomy in lectures. They are expressed in a curious mixture of Latin and English, and their general sense may be stated in the following propositions:—

1. To show as far as possible the whole of a part of the body at once, so that the relations of the structures may be grasped by the student.

2. To demonstrate the features of the particular body on the table.

3. To supply by speech only what cannot be shown on your own credit and authority.

4. To dissect as much as possible before the audience.

5. To enforce by remarks drawn from far and near, the right opinion, and to illustrate man by the structure of animals; and to bring in points beyond mere anatomy in relation to the causes of diseases, and the general study of nature, with the object of correcting mistakes and of elucidating the use and actions of parts.

6. Not to praise or to dispraise other anatomists.

7. Not to spend the short time in disputing with others or in confuting them.

8. To state things briefly and plainly, but not letting pass undescribed anything which the students can see before them.

9. Not to speak anything which may be just as well learnt at home without the body.

10. Not to spend time in minute details.

11. To give a definite time to each part of the body.

These rules complete the picture of Harvey in the lecture theatre, lucidly expounding the structure of the human body, and making clear, not only what was known before, but also what had been inexplicable till his demonstration taught the world to see clearly what wise men had looked at for ages without understanding it—the course of the blood in its lifelong circuit of the body.

tanquam Jecoris penſum reciperet ſubierviret ”

Jecoris functio; Coctio secunda sanguificatio
Questio Inter medicos et philosophos et inter Medicos

Bauhinus opiniones { Cordi Jecori venis
venis et Jecori

Laurentius { labor
venis
color Jecoris

quod × piscibus quibus Jecur flavum
Medici Elegantiores non re differunt a philosophis
1 Aristoteles Cor esse principium omnium proinde sanguificationis
tamen dicit neceesse adeo Jecur vt
nullum sanguinem carens Jecore
sic Averrhois { Inchoative Jecur
perfective Cor

2 Medici pro Jecore tamen magis Influente facultate
vnde Cor radicaliter et fundamentaliter Jecur instrumentaliter
sic occulus videt et Cerebrum
vnde perturbato Cerebro nec vident
et nec dolorem sentiunt neque movent

Jecoris actio concoctio sanguificatio
sed tanquam instrumentum cordis et secundario
vtilis etiam ad primam coctionem ventriculo Intestini vtpote fomentum et proinde
sanguineum calido Nativo abundans
Calor vero Nativum author omnium quæ circa coctionem
Naturales spiritus procreare
et instrumentum instrumentorum quod Corde primario fecit
Vtilis etiam tanquam Anchora quo venæ stabiliuntur
ad corpus
sic placenta in vtero:
Cepit Amare Jecur.
WH Yf I could shew what I hav seene y^t weare att
an end between physicians et philosophers
sanguis enim potius author viscerum quam ipsa eius
Quia inest sanguis ante viscera
nec a matre veniens in ovo etenim gutta
Anima est in sanguine
Calor nativum author et vbi
exuperat plus vbi primario primario
vidi teste Dr Argent omnia perfecta Informato Jecore
Cor formatum cum Auriculis Jecur rudis indigestaque moles
Cor Albissimum Auriculæ puniciæ refertæ sanguine

Secundum Medicos, Cor habet 2ª significatio

Quod: Medicus et philosophus et non Medicus

Bambis opinatur [illegible]

Medici Empirici non vt differt a philosophi

Prim: Cor habet pri-ripat oris [illegible] significat.

Medici Nostri dicit [illegible]

Nullus sanguis [illegible]

[illegible]

2 Medici [illegible] magis [illegible]

Cor vaporalis et fidelis: [illegible]

[illegible]

[illegible]

Secundo actio [illegible] significatio

[illegible]

Vbi [illegible] ad [illegible] rochiae [illegible]

sanguis [illegible] abundat.

Galenus spirit: Cellor vt Galenus auctor [illegible] quod [illegible]

[illegible]

Vbi [illegible] longe auctora quod [illegible]

ad corpus [illegible]

[illegible]

Wt [illegible]

[illegible]

Longe [illegible] auctor [illegible]

[illegible]

Anima est in sanguine

Calor Galenus auctor est vbi

[illegible]

Vidi [illegible]

Cor Albiss [illegible] sanguis

Splen sitt Medici alij secundum Melancol.

et [illegible]

[illegible]

[illegible]

eo similiter fuerit:

Vnde Nicolaus Rodul. placet [illegible]

melancolia sicut a pelli fere

et Ethiopi vel et grossi

vel in illa capitalis humilitate Astrici.

Non Melancolia rocha: et ita

sed pelle stili frigi et sicc.

Frigidi sunt vrsanke, di bolli et alt et bolli

et sequens ex pelli vel pelle sanguinis.

Quod vide [illegible] Egore [illegible] pauci valeri

Gabel lia corpi pro alio [illegible] lungi

et [illegible] sicut [illegible] [illegible] et [illegible]

et [illegible] quia [illegible] rindi

Differunt eo Medici melancol. sicut:

[illegible] [illegible] et stipi.

Frigi, vapori rindi varanbi

Ambo [illegible] vocat quod a [illegible] et Jacobi

quia [illegible] [illegible] sicut et quia de

quod in eo rochi

A lia Ethiopi et [illegible]

[illegible] vide et [illegible] dicit

et [illegible] [illegible] et [illegible] appetit

Hart A-bo [illegible]

Quia [illegible] [illegible] [illegible]

quia alia rodu furtia alia [illegible]

Alia bon sunt alia melancol frigi sicc.

Illi formi: quod autem [illegible] et pelas

[illegible] [illegible] et Ethiopi.

Vbi sopia valere et pelli varilub

[illegible] et [illegible] possit

Splen ſimiliter Medici alij receptaculum Melancholiæ
vt veſica fellis "ſed"
vnde ſplen Ridere facit petulanti ſplene
WH quo ſimilior conſtitutio Jecori quam veſicæ
eo ſimilior functio
vnde Neoterici Rondeletius Platerus Laurens Bauhin Vlies Veſſalius
melancholicum ſuccum a portis Jecoris
attrahit retinet concoquit
caliditate laxitate multitudine Arteriarum
Non Melancholiam coctio enim eſt iam
ſed partem chili frigidam et ſiccam
2 Ariſtoteles ſuccos vacantes diverti et attrahi ex ventriculo
et coquere eos poteſt vtpote ſanguineum
Iterum vnde cum plus Excrementi parumque caloris
habet lien corpus parum alimento immodico langueſcens
et propter confluentiam huc humoris accidit præduros ventres
ex diverticulo huc humoris crudi

3 Differunt eo quod Medici melancholicum ſuccum
ſervantes Galeni ſuppoſitum ex Hippocrate
Ariſtoteles vapores crudos vacantes
4 Ambo hoc volunt quod a ventriculo et Jecore
quia craſſum terrenum frigidum ſiccum et proinde
quod inconcoctile
A liene Attrahi et concoqui
Concluſio vnde ex ijs quæ eleganter dicta
et ex ijs quæ hic conſtitutione et ſitu apparent
Hæc Ambo viſcera inſerviunt ſanguificationi
Quia animalia vt Homo cibaria diverſarum partium
quorum alia cocta facilia alia difficiliora
Alia boni ſucci alia melancholici frigidi ſicci
Illis Jecur: quod ante reſtagnatum ad portas
(vbi etiam Bilis ſeperatur) divertitur et attrahitur
vbi copia caloris et partis raritate
ſuſcepi concoqui et perfeci poſſit

et hoc venarum fabrica videtur demonſtrari
ſi enim recepit per hunc ramum ſplenicum
et a porta Jecoris
ſic ſituatur tanquam penſum a Jecore
reciperet ſubſerviret.
vnde fœlices quibus ventriculus et lien firmi
quia occurrunt primo alimento
vt inter Milites vant=guard
vnde quibus firmiores ſalubriores
contra difficultatem errores ferunt quibus contra
vnde Lienoſi duorum generum
1 Abundanti crudo " humoribus " alimento deficiente calore lieni
magni lienes ſcirroſi præduri ventres
ſcorbutici
2 contra Adaucto calore tenui Alimento
Melancholici phanatici flatulenti
vnde Melancholici Hypochondrici deficiunt Affectione ingenio
et multi rugitus his ptyaliſmus
his ſplen-ſtone mihi frigidum actu
quibus paulo craſſiori victu vtentes
non abundant

vnde vbi illa cibariorum diverſitas non eſt aut alio

Genetalia

Nerofs.

Achiv illy

Genetalia by the ſtring tyed to eternity
in genere vnde cum Natura non potuit Individualem æternitatem
id quod potuit harum partium facultate ſpeciem æternitatis
generando ſibi ſimilem in ſecula
vnde ſacris litteris greateſt bleſſing Iſſue
that thy ſeed ſhale remayne for ever
videtur enim divinum æternum perfectum converſio
carendo potius quam fruendo quod vnumquodque Judica
quibus Nulla proles hic terminatur
contra alijs vereſimilem in æternum permanere
Quia iam vivunt homines et canes ex quorum lumbis
qui abhinc per 10 MM annis et ſeculorum
Neceſſitas talis vt Natura ſollicita eo vſque circa Individuum
donec generare ſibi ſimilem: ſpeciei gratia
vnde (as Nature regarding him not) ſtatim
deſpayreth declineth
et ſi hæ partes imo theſe little ſtrings
deeſſent omnibus hominibus or gelded
actum eſſet de humano genere
Hinc how greate and moſt affecting pleaſure
Natura huic actioni
vnde Impetuoſe inſequuntur et appetunt et agunt
quod per ſe lothſome
vnde as nil: more pleaſing to them which deſier or act
ita nil: more lotheſome to them which ar paſt it
or come to ſee it
Hinc Natura Equilibrium libidinoſorum ſterilitas
difficilis generatio et ſæpius fruſtra
vnde his maior voluptas qua ſæpeus actio perficitur
inter Animalia inter homines Calidæ Regionis
Actio itaque harum partium generari ſibi ſimilem plantare hominem
proprie ſperma facere ſervare inmittere

Vtilitates 1. perpetuitas
3 Corporis vigor harum partium Igniculis excitatur
2 Mens acuitur Corpus ſalubre redditur
vnde morbi Incurabilis circa Adventum veneris
aut curantur et qui non: aut incipiunt Incurabiles
vigor apparet Caſtratis quorum habitus anima
temperamentum et mores adeo alterantur
vt minus omnibus Magnanimitate Ingenio ſapientia
fortitudine vel ſanitate: in fœminas degenerant.
Apparet item Maribus et fœminis qui moderate vtuntur
never more brave ſprightly blith valiant pleſant
or bewtifull quam iam coitum celebraturi
Apparet ex ijs quæ circa adventum veneris contingunt
vox permutatur pubeſcunt Inguina, fratrare vbera
leporem vultu conciliari venuſtatem Membris omnibus
Quantum moderate ſumpta vigorat tanto
nimium enervat, mens hebeſcit
quia by how "muſh" much this is affecting pleaſent
tanto abuſus periculoſior, vt vinum
vnde vtilitas magna excrementi evacuatio
cuius defectu viri patiuntur plurimum
vnde clericis ad expurgandos renes licuit
et Cynicum: non exſpectantem: meretricem Gallicam laudavi
Item Mulieres multo graviora ex hiſtorijs et
noviter expreſſa quotidiana qui ſymptomata Hiſterica curant

Sperma quia precipuum generationis effectivum
omnes hæ partes ſpermatis gratia: et tot plures muliebribus
vnde perfectio huius operationis viz. generationis
circa quam Natura adeo ſollicita
vt tota Anatomia nil: admirabilius: quam iſtarum fabrica
Quia quo plura requiruntur ad perfectionem eo divinius
et contra quo excellentius Animal eo perfectiora plura
Tranſcripſi de partibus fœmineis alibi cum ex profeſſo Anatomia prægnantis

Motus vulgo creditur Mucrone ad baſim
attracta fieri dilatationem ventriculi et
eſſe diaaſtole
contra relaxari et fieri ſyſtolen
vnde ferit pectus diaſtollen
et diaſtole dilatato corde dilatatur Arteria
et quod præcipuus Motus cordis diaſtoles
et quod ſyſtole contingit Mors
et quod a " ſyſtole " diaſtole interna quies cordis et pulſuum

Ego per integras horas animadvertendo, non facile
potui diſcernere neque viſu neque tactu.
quare vobis cernendum et indicandum proponam.
videtur mihi potius aut quum appellat diaſtolen
eſſe Contractionem cordis et proinde male definitam
aut × eſſe quæ dicunt:
Aut ſaltem diaſtole diſtendi Carnoſitatem cordis
coarctari vero ventriculos.

Columbus p. 474 dum cor dilatatur conſtringi arterias et rurſus
in cordis conſtrictione dilatari venam. NB quod dum cor
ſurſum fertur et tumefieri videtur tum Conſtringitur.
cum vero ſe exerit quaſi relaxans deorſum vergit
et eo tempore dicitur cor quieſcere, eſſeque tunc
cordis ſyſtole Quia facilius ſuſcepit mi=
noreque labore att cum tranſmittit maiori
opus eſt Robore, neque hoc flocci facias
etiam non paucos reperies qui eo tempore
cor dilatari certò opinantur, quo vere conſtringitur

Mosheim Vulgo credidit. Mansuetum ad Basin
attinuisse fuisse dilectionis vocabulo et
esse diaglossa
quam vulgari et fuisse scholae.
Inde fecit posteriores diaglossam
et diaglossa dilectus vocabulum dilectus Ecclesiae
et quod peculiarius Mosheim vocabit diaglossam
et quod scholae vocabit Mosheim
et quod et scholae — Hoc quidem vocabit pulsi.

Ego J. Boxhorn, locum a me citatum, non facile
potui discernere nec visum mihi lucem.
Quare vobis rogandi et indicandi ego ad
Dominum nisi certius aut quasi appellat diaglossam.
esse glossarium vocabitur quidem de multo desiderat
aut. x esse quod dicit:
At fuerit diaglossa disponi Calvisius vocabit
Concludere vocabulorum.

Colmb. p. 474. Non vero dilectus vocabitur aliquid et quod
vocabit gothicum dilectum vocabit. Quod non vero
fuerit pater et Lapidem vocabit. Vocabitur gothicum
vocabit. Et esset quasi valeat Deo et bonum
et eo longe dicit vero quasi, esse hunc
vocabit scholae quia sunt fuerunt mi=
norum habere et non humilitatem maiorum
esse et habere, nec non fuerit fuerint
alias non fuerit exposita quae eo longe
vocabit dilectum, vocabitur opinatur, quod vocabitur gothicum

De 4° dubium an Naturalis an Animalis
Motus pectoris et diaphragmatis Animalis mere
licet non cogitantibus quia ſic ambulant
delirantes: ſic flebiteing ſcratch. embrione: ſomnolentis E[d]: Ro
Δ Cis: Hill: WH vnde aliquibus Animalibus Inſpiratio perfici non poteſt
Abſque actione Animali: ſed per ſe Naturalis
vt inteſtinorum: vteri cordis
WH vnde Motus pulmonum neceſſe reſpirationi
vox animalis Motus pectoris ad melius vel ſine qua non.
et ſimul fiunt admirabili Conſenſu
et tuſſis motus Animalis licet Iritat ex pultrice
vt vomitu diglutitione et quicquid infeſtat Membra
movet ad defenſionem:
fames motum, obiectum ſenſibilem voluntatem
a Naturali facultate Animalis adeo nocitat
(Galenus Motus Muſculis ſubſervit)
vt nihil intellectu cohibere impetum poteſt.
[p]ulmonum ſi Naturalis "Δ Cauteriam"
2° pulmones torpent vel concidunt Chincough Aura venenata
licet agitatum pectus non ſequuntur
vt by the opening of a pitt choked
vt corn heapes in Apuglia
et diing crye Oh my breath is gone
agitando pectus ex induſtria Δ WH Δ p: 8 finiſh:
ſed quod non fieri Abſque animali facultate
et ita voluntarij apparent Captivi Galenus
Exempta C: Licinius Macer accuſat Ciceronem de repetundis &c. apud Valerium
Laurens p. 373 ſed vt plurimum ſuſcitat tantum paſſionem
as Not velle almoſt can overcum Δ Cautela Macro
yett theſe ſtoryes are cited: but they are rare
yet ſufficient to teſtefy
pueri ludentes detenendo ſpiritus ob colorem
vſque torpedinem pulmones reſpirare non poſſunt
ſoe curſt children by eager crying
grow black and ſuffocated, non deficiente
animali facultate
WH pulmonum motus eſſe voluntarios licet aliquando
abſque fantaſia viz: cito pertranſiunt vt deliri
abſque memoria: et licet coacti vt vrina

De Concoctiva facultate vel alteratione pulmonum
non ita constat vnde diversitas dubia
1° An aliqua talis publica functio necne
2° qualis alteratio an calefactio an refrigeratio
et si calefactio an præparatio an concoctio
3° subiectum huius alterationis et quod facit cum { sanguine / Aere / spiritu
Hæc magna dubia et ambigua vt longiori
desiderantia tempore: opinione dico ratione ex hoc Corpore
1º habere publicam functionem apparet ex vasis magnis &c.
Natura enim nihil frustra. publica vasa: publicus vsus.
2° hinc plurima excrementa: vt tussi sputo
quia vbi seperatur esse concocta apparet
contra tamen alijs animalibus quibus fungosi et visculares pulmones
neque sanguis neque excrementa
vnde si concoquunt vt verisimile: in quibusdam tantum
viz vbi carnosi sanguinolenti × Embrione
vnde quia non in omnibus apparet
concoctionem esse secundam functionem.
præcipua functio motus et pars principalis
primario et magis principaliter Bronchiæ
Actio vtraque secundum scolam Medicorum 1º refrigerat sanguinem et contemperat
et similiter quod præparant spiritum Naturalem et Aerem
vt fiant spiritus vitales in corde
Columbus aijt ipsum fuisse inventorem qui dicit
præparari spiritus motu continuo: sanguis enim
dum Agitur tenuis redditur cum Aere permiscetur
Colliditur præparatur WH crarned quo spuma
fit apparet of the frothynes pulmonum
(et quod sic Galen) spiritus aerem concoquit vitalem
vt caro-Jecur sanguis WH quorsum enim parenchyma
Galenus 7 & p. 8º

De Concordia Fa[illegible] vel aliorum: pulchr[illegible]
non illa [illegible] vel [illegible] dubiu. 85
1° An aliq[illegible] talis publica [illegible] non
2° qualis altio[illegible] an solebat, an [illegible]
et [illegible] solebat an [illegible] an [illegible]
3° [illegible] alterutri et [illegible]
Hæc magna dubia et ambigua vel [illegible]
[illegible] tempore: opinio [illegible]

1° Sabbat publicum: [illegible] appellat [illegible] magi[illegible]
Pal: 1: nihil [illegible] publica [illegible] publicus
2° Quia planeta [illegible] aula: vel [illegible]
q. [illegible] [illegible] [illegible] appellat.
Stella lumen alij [illegible] [illegible] palatio
[illegible]
vel [illegible] vel [illegible]
[illegible] vel [illegible] [illegible]
vel quia non [illegible] appellat
Concubiorum. [illegible] 2. [illegible]
[illegible] [illegible] [illegible]
[illegible] vel [illegible] [illegible]

Ad [illegible] 2° [illegible] Medic: 1° [illegible]
[illegible] [illegible] [illegible]
vel [illegible] [illegible]
Concubitus [illegible] [illegible]
[illegible] [illegible] [illegible]
[illegible] [illegible] [illegible]
Colidit [illegible] [illegible] [illegible]
[illegible] appellat [illegible] [illegible]
(et [illegible] Galen [illegible]
vel [illegible] [illegible]
Gal: 7 [illegible] 8.

3° 2 Fedor spiritus vitalis sit de naturali et de aere
vel pulmone ambo enim generantur ex sanguine
vel ex corde et est in quo est spiritus
sanguis qui exhalatur ad cutem
et per ipsum et insuffletur
vel non sit ibidem suffocat
et ipsi cutem aperiri; Julian Fossat:
Wheller of Cambridge.
Virg: rationabiliter nunquam illila ro-nabiliter
vel quod habet: Quia habulus
Cum sit minus plus desiderat
Calo spatio ab ipso maris in alia desia
sicut superabit rotulis: Nunquam rabi
illila ro-nabiliter facta.

Sed philosophis omnes conveniunt
unanimes spiritus ab anima et patris
esse distinct et separat et generati
in diversis locis habentibus diversis
Sed spiritus et sunt una res et sunt
et generantur in cordis. et Aristot: ratio
sunt et ex Calida. non et Humido et
flegma. per actum illius: et lumen
actus luminis
et rationalis lux in spiritu sunt:
et habet actus in fieri et flamma flam
in actu existit generatur et flegma
Si ex aere ro-nabiliter fit spiritus nor
et fit humidus ruffidus sicut
quod a Deus: Aliter Deus. et spiritus
sicut humidus quod lumen pulmonis quia
et ipse spiritus et sanguis et Epiciclis.

fit non
ex aere

3° ſecundum Medicos ſpiritus vitales fiunt ex Naturalibus et Aere
vnde pulmones ambo hac concoqui præparatione
vnde Excrementa horum inter Aquam et Aerem
fuligo qui expiratione efflatur
et hoc continue et inceſſanter
vnde Aer Inſpiratus unidoneus ſuffocat
vt ij qui Carbonibus accenſis : Julian Imperator
WH ſcoller of Cambridg.
vt ij qui conclavi nuper calce illita concalefacti
vt apud Valerium Quintus Catulus
Cymbrici triumphi particeps deſignatus
Caio Mario ; ab ipſo Mario morti deſignatus
ſeipſum ſuffocavit conclavi Nuper calce
illita concalefacta
Sed philoſophice magis (non vt
vulgus ſpiritus ab humoribus et partibus
eſſe diſtinctos et ſeperatos vt geniti
in diverſis locis vel contenti diverſis)
ſed ſpiritus et ſanguis vna res vt ſerum
et cremor in lacte. et Ariſtoteles ratio
ſanguinis vt Aqua calida. "non" vt Nidor et
flamma. hæc actus illius. et lumen
actus lucidi
vt candela lux ita ſpiritus ſanguine
et habet actum in fieri vt flamme flamma
in continua exiſtens generatione et fluxu

Spiritus non ex Aere

Si ex aere concoctus fiat ſpiritus Aer
vt fit tenuior craſſior ſi craſſus
quomodo a bronchiis in arteria venoſa et ſpiritus
ſi tenuior quomodo tunica pulmonum generatur
cum per ipſum pus et ſerum in Empiemate

Quomodo (cum miſtio ſit alteratorum vnio)
Aer cum ſanguine poſſit permiſceri vniri
quid permiſcit et alterat ſi calor
tenuior fit aer. ſi craſſior dum
præparatur fit a frigore quod Impoſſibile pulmonibus
Ariſtoteles valens Argumentum ſi ſpiritus ab aere
quomodo piſcibus. Agiles enim et ſpiritu Abundant
Concluſio. opinio WH in quibus pulmones carnoſi
et ſanguine repleti concoquunt ſanguinem cum ſpiritus et ſanguis vna res: eadem
ratione qua Jecur et iſdem Argumentis
Immo potius WH refrigerando halitum
pinguem et oleoſum detinet vt refrigeret
in Alembic et ſerpentina oleum
ſive Balſamum ſive pingue Alimentoſum
